

Airsoftbomb: Wire cutting function

This is how to use the wire cutting wires in your own egg timer.

This is the connector you'll get with the complete kit.

The small black dots show the wire number.

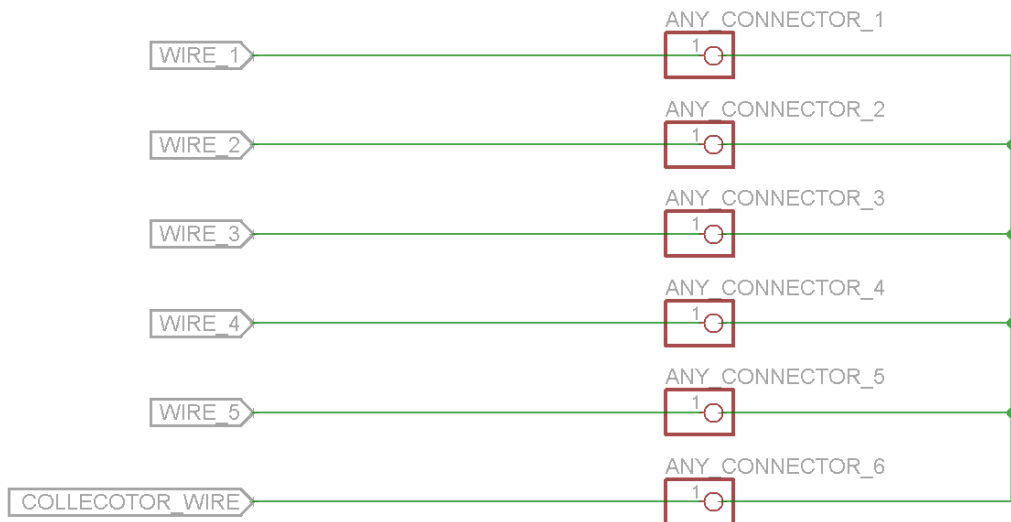

One dot = Wire number one

Two dots = Wire number two

and so on.

The black wire (long black mark) is the collector wire.

Here is how to connect the wires:

You only need any connector you want! Just connect every wire with the collector wire!

That's all! Only a connector or some wires you cut or whatever you want, nothing else!
